

Drones in agriculture

LEGEND:

**HEALTHY CROPS
APPEAR GREEN**

**WEAK OR POOR AREAS
APPEAR YELLOW TO RED**

CAF Consulting and Advanced Ag join forces to bring farmers precision analysis of crop health using drone NDVI images

- No longer wait for fortnightly satellite NDVI image — we fly when the experts advise with guaranteed next day crop health image
- No issues with cloud blocking crops
- Drone accurate to 50 mm — so every plant is analysed. Satellite image leaves gaps in crops
- Advanced Ag dissect data and advise on action plan to improve crop quality and ultimately yields
- Data files available for immediate upload into GPS fertiliser spreaders for targeting inputs into exact areas of need

Contact Advanced Ag on (03) 5822 4862 for a price list and discuss first hand their experience on the benefits of drones in agriculture
